TABLE 1
Factor Matrix on Software Risks

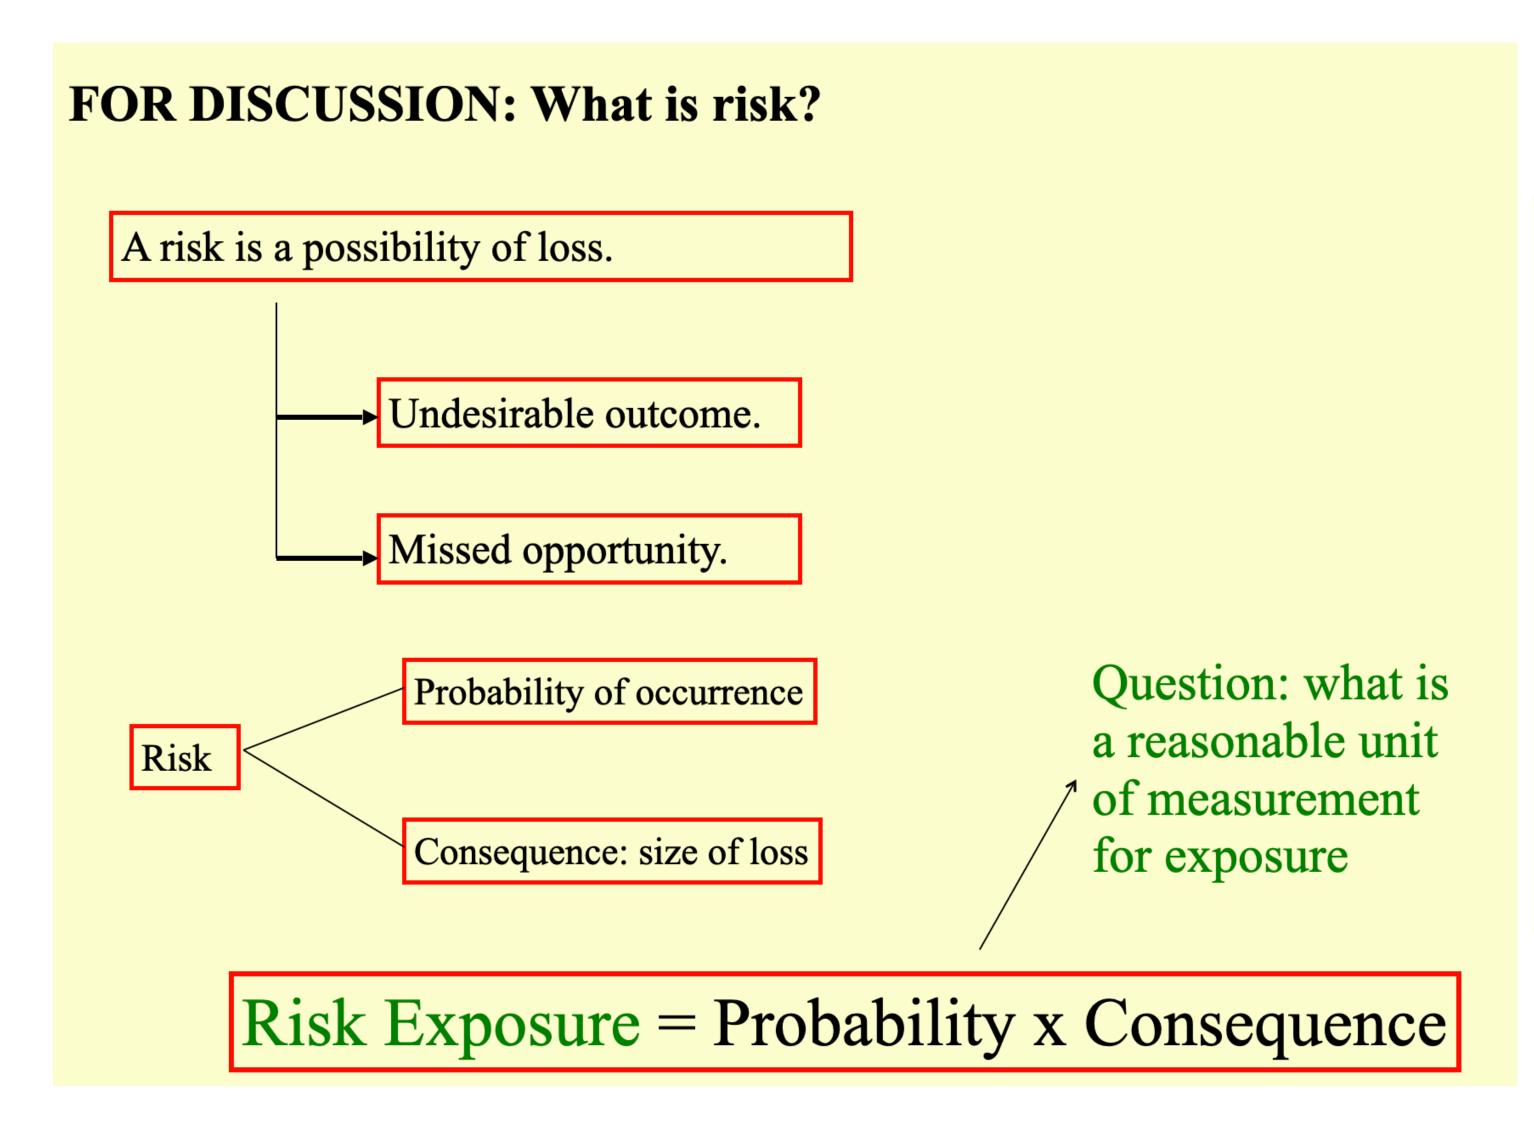

CSC 4104	

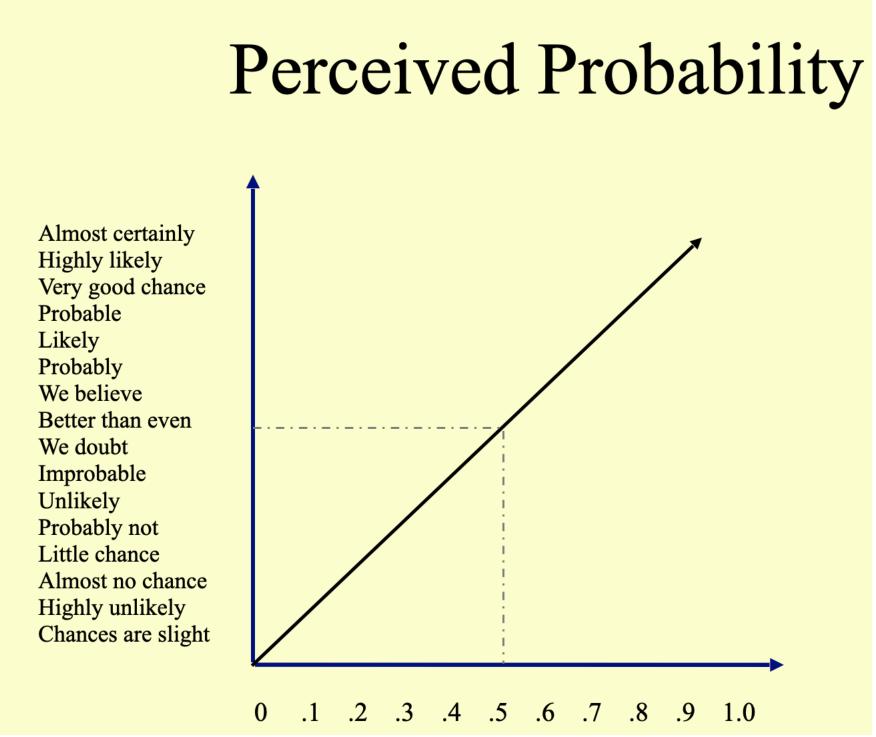

Factors	Factor 1	Factor 2	Factor 3	Factor 4	Factor 5	Factor 6
	Scheduling	System	Sub-	Requir.	Res. use	Personnel
Variables	Timing	function.	contract.	Manag.	perform.	manag.
Personnel shortfalls	00280	07714	02218	.01591	.02593	.75975
Problems in timetable	.83713	.04218	05162	.18396	15252	.08019
Resource usage and deadline	10617	11342	06551	.05988	.84819	.11891
Actual costs vs. estimated costs	.73074	27027	.16433	02437	.00298	.08001
Wrong size estimates	.61561	.22824	.22494	11404	.35527	01836
Estimates for personnel need	.55120	.43683	.42497	02526	00559	09131
Steady consumption of time	.01702	.19711	.03388	.48534	.06886	.40460
Insufficient expertise	.33951	.34520	.21398	31981	.07002	.39192
Managing project complexity	.52462	.08301	.23004	.24002	.48669	00887
Functions and properties correct	14384	.68828	.08495	.17152	.05864	.09647
Gold plating	03734	.34691	.25577	.60022	.10082	23089
Requirement changes	.28515	.04586	.07563	.75526	.07941	.12582
Changes in timetable	.65640	.02312	09419	.47302	.01124	08475
Satisfaction with the user interface	.07839	.79661	12782	.12238	13369	.13935
Shortfalls in externally furnished components	.12644	.09566	.79357	.04726	.06017	.03823
Unrealistic expectation of the personnel's abilities	.01215	.21776	.27694	.04472	.15203	.57234
Evaluation of performance requirements	.10498	.33530	.02009	.10129	.49317	.38082
Success in externally performed tasks	.07044	06682	.83802	.12630	02520	.16717
Estimation of hardware and software capabilities	.16448	.62809	.19168	.04457	.47688	06653

Legend of the table: Grayed entries denote the entries that loaded, i.e., have a high correlation with the factors defined in the column.

# Risk Analysis Table - FOR YOUR PROJECT

		Impact				
		Trivial	Minor	Moderate	Major	Extreme
	Rare	Low	Low	Low	Medium	Medium
<u>+</u>	Unlikely	Low	Low	Medium	Medium	Medium
Probabi	Moderate	Low	Medium	Medium	Medium	High
ž	Likely	Medium	Medium	Medium	High	High
	Very likely	Medium	Medium	High	High	High

https://www.justgetpmp.com/2012/02/probability-and-impact-matrix.html

#### Classification of software risks

There are many different classification frameworks, eg:

### Software Project Risks

-Resource constraints, external interfaces, supplier relationships, nonperforming vendors, internal politics, interteam/intergroup coordination problems, inadequate funding.

#### Software Process Risks

-Undocumented software process, lack of effective peer reviews, no defect prevention, poor design process, poor requirements management, ineffective planning.

#### Software Product Risks

-Lack of domain expertise, complex design, poorly defined interfaces, poorly understood legacy system(s), vague or incomplete requirements.

-----

# SOFTWARE REQUIREMENT RISKS

Lack of analysis for change of	Change extension of
requirements	requirements
Lack of report for requirements	Poor definition of requirements
Ambiguity of requirements	Change of requirements
Inadequate of requirements	Impossible requirements
Invalid requirements	

# CSC 4104

# FOR YOUR PROJECT

## SOFTWARE COST RISKS

Lack of good estimation in projects	Unrealistic schedule	
The hardware does not work well	Human errors	
Lack of testing	Lack of monitoring	
Complexity of architecture	Large size of architecture	
Extension of requirements change	The tools does not work well	
Personnel change	Management change	
Technology change	Environment change	
Lack of reassessment of		
management cycle		

# FOR YOUR PROJECT

#### SOFTWARE SCHEDULING RISKS

Inadequate budget	Change of requirements		
Extension of requirements change	Human errors		
Inadequate knowledge about tools	Inadequate knowledge about techniques		
Long-term training for personnel	Lack of employment of manager experience		
Lack of enough skill	Lack of good estimation in projects		
Lack of accurate system domain definition	Lack of goals specification		
Difficulty of implementation	Disagreement between members		
Lack of tools	Shortage of personnel		
Tools failure	Technology change		
Lack of agreement between customer and developer	Slow management cycle		
Supply budget in inappropriate time	Environment change		
Lack of a good guideline			

#### SOFTWARE QUALITY RISKS

Extension of requirements change  Lack of enough skill  Lack of good estimation in projects  Lack of employment of manager experience  The simulator is to be destroyed  Inadequate knowledge about programming language  The hardware does not work well  The tools do not work well  Lack of stability between personnel  Weakness of management  Lack of commitment  Lack of commitment  Lack of commitment  Lack of complexity of architecture  requirements  Lack of testing  Inadequate knowledge about techniques  Lack of accurate system domain definition  Lack of reassessment  Inadequate knowledge about tools  Lack of analysis for change of requirements  Lack of analysis for change of requirements  Lack of commitment  Personnel change	Bor I with Qui	TELLI LIGITO		
Human errors  Extension of requirements change  Lack of enough skill  Lack of good estimation in projects  Lack of employment of manager experience  The simulator is to be destroyed  Inadequate knowledge about programming language  The hardware does not work well  The tools do not work well  Lack of stability between personnel  Weakness of management  Disagreement between members  Complexity of architecture  Management change  Lack of collaboration between definition  Unrealistic schedule  Poor definition of requirements  Inadequate knowledge about techniques  Lack of accurate system domain definition  Lack of reassessment  Inadequate knowledge about tools  Lack of analysis for change of requirements  Loss technical equipment  Personnel change  Personnel change  Inadequate training of personnel  Inadequate training of personnel  Technology change  Environment change	Inadequate documentation	Lack of project standard		
Extension of requirements change  Lack of enough skill  Lack of good estimation in projects  Lack of employment of manager experience  The simulator is to be destroyed  Inadequate knowledge about programming language  The hardware does not work well  The tools do not work well  Lack of stability between personnel  Weakness of management  Disagreement between members  Complexity of architecture  Lack of collaboration between definition  Poor definition  Inadequate knowledge about techniques  Lack of accurate system domain definition  Lack of reassessment  Inadequate knowledge about tools  Lack of analysis for change of requirements  Loss technical equipment  Personnel change  Personnel change  Incomplete requirements  Inadequate training of personnel  Management change  Environment change	Lack of design documentation	Inadequate budget		
Extension of requirements change  Lack of enough skill  Lack of good estimation in projects  Lack of employment of manager experience  The simulator is to be destroyed  Inadequate knowledge about programming language  The hardware does not work well  The tools do not work well  Lack of stability between personnel  Weakness of management  Disagreement between members  Complexity of architecture  Lack of collaboration between developer  Tequirements  Lack of testing  Inadequate knowledge about techniques  Lack of reassessment  Inadequate knowledge about tools  Lack of analysis for change of requirements  Lack of analysis for change of requirements  Lack of commitment  Disagreement between members  Complexity of architecture  Incomplete requirements  Inadequate training of personnel  Management change  Environment change	Human errors	Unrealistic schedule		
Lack of good estimation in projects  Lack of employment of manager experience  The simulator is to be destroyed Inadequate knowledge about programming language  The hardware does not work well  The tools do not work well  Lack of stability between personnel  Weakness of management  Disagreement between members  Complexity of architecture  Lack of collaboration between developer  Inadequate knowledge about Inadequate knowledge about tools  Lack of analysis for change of requirements  Lack of analysis for change of requirements  Lack of commitment  Lack of commitment  Ambiguity of requirements  Inadequate training of personnel  Technology change  Environment change	Extension of requirements change			
Lack of employment of manager experience  The simulator is to be destroyed Inadequate knowledge about programming language  The hardware does not work well The tools do not work well Lack of stability between personnel  Weakness of management Disagreement between members Complexity of architecture Lack of collaboration between developer  about techniques Lack of accurate system domain definition  Lack of reassessment Inadequate knowledge about tools Lack of analysis for change of requirements Lack of analysis for change of requirements  Lack of commitment Personnel change  Lack of commitment Incomplete requirements Inadequate training of personnel  Management change Environment change	Lack of enough skill	Lack of testing		
The simulator is to be destroyed Inadequate knowledge about programming language  The hardware does not work well The tools do not work well Lack of stability between personnel Weakness of management Disagreement between members Complexity of architecture Lack of roles and responsibilities Management change Lack of collaboration between domain definition  Lack of reassessment Inadequate knowledge about tools Lack of analysis for change of requirements Lack of analysis for change of requirements Lack of commitment Personnel change  Lack of commitment Incomplete requirements Inadequate training of personnel  Management change Lack of collaboration between developer				
Inadequate knowledge about programming language about tools  The hardware does not work well  The tools do not work well  Lack of stability between personnel  Weakness of management  Disagreement between members  Complexity of architecture  Lack of roles and responsibilities  Management change  Lack of collaboration between developer  Inadequate knowledge about tools  Lack of analysis for change of requirements  Lack of complexity of requirement  Lack of commitment  Ambiguity of requirements  Inadequate training of personnel  Management change  Environment change				
The hardware does not work well  The tools do not work well  Lack of stability between personnel  Weakness of management  Disagreement between members  Complexity of architecture  Lack of roles and responsibilities  definition  Management change  Lack of collaboration between developer  about tools  Lack of analysis for change of requirements  Loss technical equipment  Personnel change  Personnel change  Incomplete requirements  Inadequate training of personnel  Technology change  Environment change	The simulator is to be destroyed	Lack of reassessment		
The tools do not work well  Lack of stability between personnel  Weakness of management  Disagreement between members  Complexity of architecture  Lack of roles and responsibilities definition  Management change  Lack of collaboration between developer  of requirements  Loss technical equipment  Personnel change  Ambiguity of requirements  Incomplete requirements  Inadequate training of personnel  Technology change  Environment change		Inadequate knowledge about tools		
Lack of stability between personnel  Weakness of management	The hardware does not work well			
Disagreement between members   Lack of commitment	The tools do not work well	Loss technical equipment		
Disagreement between members Complexity of architecture Lack of roles and responsibilities definition Inadequate training of personnel Management change Lack of collaboration between developer  Ambiguity of requirements Incomplete requirements Inadequate training of personnel Environment change		Personnel change		
Complexity of architecture Incomplete requirements  Lack of roles and responsibilities Inadequate training of definition personnel  Management change Technology change  Lack of collaboration between developer Environment change	Weakness of management	Lack of commitment		
Complexity of architecture Incomplete requirements  Lack of roles and responsibilities Inadequate training of definition personnel  Management change Technology change  Lack of collaboration between developer Environment change	Disagreement between members	Ambiguity of requirements		
definition personnel  Management change Technology change  Lack of collaboration between developer Environment change	Complexity of architecture

# FOR YOUR PROJECT

#### SOFTWARE BUSINESS RISKS

The products that no one want them

The products that are not suitable with total strategy

The products that sellers do not know how to sell them

Failure in total budget

Failure in commitment

Failure in management because of change in different people

#### **OPTIONAL - FOR YOUR PROJECT**

Identify ten different risks (at least 1 of each type)

For each risk, complete a probability-and-impact-matrix

For the 3 most severe risks, suggest mitigation factors
